Whoosh! Mobile Parking
Parking Technology

Whoosh is an intuitive and easy-to-use mobile parking application, using GPS locations to automatically identify where you are parked. There is no need to enter a meter or zone code unless you have the location services turned off on your phone. This instinctual process of using a “virtual wheel” on the touch screen makes paying for parking a breeze!

Not only can you pay on the application but you can also pay on the website at whooshstore.com. The site is particularly well suited for Whooshers who enjoy paying from their desks.

**Parking Expiration Alerts:**
As a reminder of the approaching end time of your parking stay, the Whoosh service can send an alert directly to your phone.

**How does it confirm my parking stay?**
All Whoosh payments are electronically transmitted to parking enforcement staff. Payments can be viewed in your account history as well.

**Extend your parking stay!**
One of many benefits of Whoosh is the possibility to extend time remotely. Simply select Extension and add the desired parking time to your stay.
Whoosh! For Operators

- Offers an economical and cost-effective solution to provide mobile phone-based parking payment services.
- Completely integrates with Parkeon’s myParkfolio centralized management solution with all other payment methods, including cash, credit/debit cards, smart cards, permits, as well as on-line systems.
- Supports incremental hourly, daily, weekly and monthly tariffs, as well as annual permits.
- Reduces frequency of cash collections and ticket management.
- Allows rate change to be managed remotely, on-line.
- Available as stand-alone solution.
- Quick enforcement of mobile phone payments via web-based application, or integrated with 3rd party enforcement technologies.

Whoosh! Sales Channels

- Website for online payment.
- Smartphones (App for iPhone and Android).
- Internet mobile.
- Mobile phones (Interactive Voice Response, SMS payment)

Whoosh! For Motorists

- Offers an additional and convenient means of payment.
- Provides on-line account management and receipts for registered users.
- Generates reminders before time expires.
- Enables users to extend parking periods remotely, via their mobile device (within local parking restrictions).
